Background Head-lice infestation
is prevalent worldwide, especially
in children 3 to 11 years old.
Topical insecticides (i.e.,
pyrethroids and malathion) used
as a lotion, applied twice at an
interval of 7 to 11 days, are
typically used for treatment.
Resistance of lice to insecticides,
particularly pyrethroids, results in
treatment failure. Sun, 20 May

Substance Abuse - Soy
protein-based formulas have been
available for almost 100 years.
Since the first use of soy formula
as a milk substitute for an infant
protein-based formula, the
formulation has changed to the
current soy protein isolate.
Despite very limited indications
for its use, soy protein-based
formulas in the United States may
account for nearly 25% of the
formula market. Wed, 23 May
